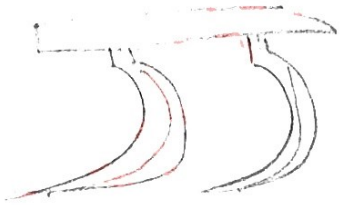
Experiment No.11

Title : To study the charactristics of riped hybrid and local vairety of banana available in market.

Material : Local and Hybrid riped banana fruit, Universal indicator, litmus paper, etc.

Figure/ Pictures : (Paste or draw the pictures of banana)

Local banana



Hybrid banana

Procedure :

1. Bring the local and hybrid variety of banana from market.
2. Note down the observations like colour, length, colour of petiole, taste, etc.of both the banana.
3. Keep both the bananas in seperate water jar for 10 to 15 minits.
4. Measure the pH of water seperately with the help of universal indicator.
5. Take litmus papers (Blue and Red). Test the water from both the jars

Observation Table :

Observations	Hybrid banana	Local banana
Colour of petiole of banana	Greenish red	Green
Colour of banana	lite yellow	Blact + yellowish
Length of banana	large	Short
Girth/ Circumference of banana	large	Short
Taste of banana	sweet more	sweet
Change in Universal indicator	change to Blue	change to red
Change in litmus paper	Red to blue	blue to red.

Inference :

The hybrid banana is more big in size and more sweet, when compared to local banana.

Multiple Choice Questions

1. The main difference between the ripe hybrid and local banana is.....
   A. both are not edible. B. both varieties are not easily available in the market.
   C. both bananas are differing in their colour, size and taste.
   D. All above options are correct.
2. The length of the hybrid banana is .....compared to local banana.
   A. more B. less C. same D. not fixed
3. The taste of local banana is .....
   A. Sweet B. Sour and Sweet C. Sour D. Bitter
4. In Maharashtra .....district is famous for producing hybrid bananas.
   A. Pune B. Amaravati C. Solapur D. Jalgaon

Questions

1. In today's world why Genetically Modified Crops are more beneficial?

1) Less use of pesticides.
2) Increased supply of food with reduced cost and larger self life.
3) Faster growing crop.
4) food with more desirable traits.

2. List five hybrid varieties each of fruits, cereals, vegetables.

1) Hybrids fruit :- Tangor, pluot, orangela, mango, Jastaberry.
2) Hybride cereals :- winter wheat, winter barley, oilseed rape.
3) Hybride vegetables :- Tomato, french bean, cauliflower.

3. Write your opinion about local and hybrid variety regarding the health and economy.

According to my opinion :- Local varities are more beneficial than the hybride but economically it is not to beneficial also it gives fewer to quality yield and vice versa.
