Note : Teacher can select the monocot and dicot plants as per the availability in the area.

Observation :

(Consider different parts of plants in observation and note down the inference related to it.)

Parts of Plant	Tuberose	Hibiscus
Roots	fibrous roots	Taproot
Stem	feect green tended	strong
Leaves	Parallelventation	Rectangle vent
Flowers	white & fragreen	solinuty and large
order	liliques	malves
class	monotelodone	picotoledouns.

Multiple choice questions

1. Which of the following plant shows parallel venation?
   A. Banana B. Mango C. Sweet pea D. Banyan
2. Which of the following plant shows discoid stem?
   A. Jack fruit B. Mango C. Peepal D. Onion
3. In grasses, roots belong to the type.....
   A. Fibrous B. Tap C. Pnematophores D. Relamen
4. Which of the following flower is odourous?
   A. Tuberose B. Hibiscus
5. Catharanthus belongs to.....division.
   A. Bryophyta B. Pteridophyta C. Gymnosperms D. Angiosperms

Questions

1. Which criterias are used for classifying the plants?

The criteria is used for classification plants is used bearing are not flower bring or not the seed of any plant are enclosed or the close.

2. Write the classification of hibiscus and tuberose?

Hierarchy	Hibiscus	Tuberose
Kingdom	plant	top
Division	spemantrophy	Spemantrophy
Class	Di	mono
Order	malves	lilves
Family	Hibicus	Amorly
Genus	malvelence	Polunfais
Species	flower	Polynothel

It is hibiscus and tuberose belongs to the division seperate raphutra class dicat- and monocoat order are malvates and lilos the Gvenus one hibicus and hunt the specis are flower and polyhem. tuberose

3. Observe the plants of Sorghum and chilli. Complete the following chart and explain.

Criteria	Sorghum	Chilly
Root	Fibrous	Tap root
Stem	Hollow and tapering	solid & slender
Leaves	Parallel	Reticulate
Flowers	Trimerous	Pentamerous
Friuts	caryopsis	Berry
Other	Flowering plant	solance ge.

Strong has flowers roots and chilly has tap roots these term are hollow topezing and strong lives Gre parallel and red alty.
