Experiment No.7

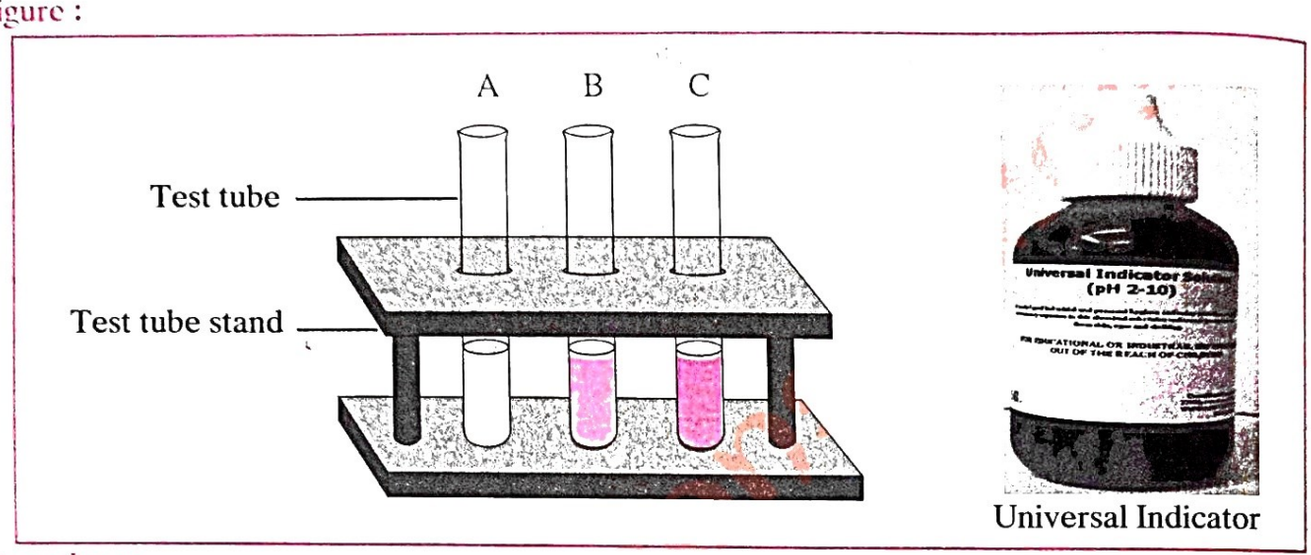
Title : Identify the acid, base and salt from the given solutions using indicator.

Apparatus : Test tubes, Test tube stand, Dropper etc.

Chemicals : Sodium carbonate, Bleaching powder, lemon juice, Indicator etc.

(**Indicators** – Litmus paper, Universal Indicator.)

Figure :



Procedure :

1. Take the solutions A, B, C in three test tubes respectively.
2. Test the solution with the help of any one of the indicators and note the observation in the observation table.

Observation Table :

Sr. No.	Solution	Indicator	Observation : Colour	Inference : Acid/ Base/Salt
1	A sodium carbonate.	Universal.	Blue	Basic
2	B Lemon Juice.	Universal	orange	Acidic
3	C Bleching Powder	Universal	Bluish green.	Basic.

Inference :

solution A is sodium carbonate solution it is salt and weak acid strong base. Therefore it has a basic nature solution. B is lemon juice it is acidic nature it is contain natural acid. solution C is Bleacking Powder Solution it is also a salt it is Basic in nature.

Multiple Choice Questions

1. ..... is a natural indicator from the following.
   A. Litmus B. Methyl orange C. Universal indicator D. Phenolphthalein
2. Identify the odd one out.
   A. Rose petals B. Eosin C. Beet D. Turmeric
3. The Mixture of many indicators in certain proportion is called .....
   A. Universal solvent B. Synthetic indicator C. Natural indicator D. Universal indicator
4. ..... colour will be obtained on putting universal indicator in diluted kokum extract.
   A. Red B. Orange C. Dark pink D. Yellow

Questions

1. Why the turmeric stain on a cloth becomes reddish while washing with soap?

When we wash cloth soap of termeric become raddish because the chemical reaction happen in this and its colour changes.

2. How will you find out whether the soil is fertile or not using an acid-base indicator?

It can find by acid - base indicators such as PH strip ~~or~~ or PH meters.

3. Why lemon and tamarind is used for leanning the copper pots/vessels?

Lemon and turmarid contains acid so it is used for cleaning copper Post/vessele.

4. From which substances natural indicators are prepared? Explain any one in detail with procedure.

The colour of natural acid basic indicators depaind on PH one of the most well known object indicates in plants accur in the hydrogen or snow ball plant hydrongen flower are Blue grocon in acidic solid and pink or red in basic the salt.
