

Chapter 2: Endogenetic Movements

Note: Refer to textbook diagrams/maps where necessary.

Q. 1 Show the following details in the map given below :

Q. 2 Make friends with maps ! (Textbook page 17)

[Draw Plate Boundaries, Earthquake Zones and Volcanoes Map]

1) Examine the plate boundaries in the given map and write the names of the plates.

Pacific plate, North American plate, South American plate, Eurasian plate, African plate, Antarctic plate, Indo-Australian plate.

2) On which side of the continents of the North and South America are the earthquake prone zones located? Which mountains are located there?

The earthquake prone zones are located on the western side of North and South America. In North America, Pacific coastal ranges are located there.

3) In which mountainous zone in Asia does the earthquake-prone zone lie?

In Asia, the earthquake-prone zone lies in the Himalayan mountainous zone.

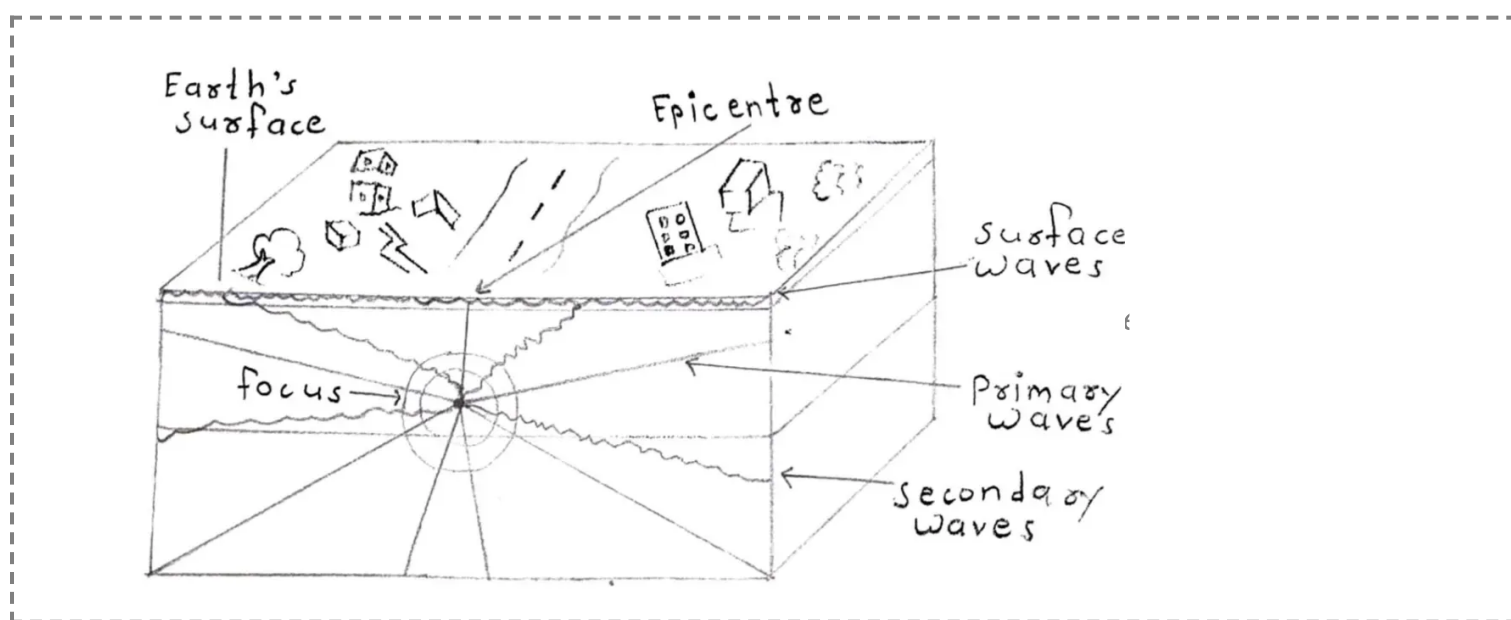

4) In which region are the volcanoes concentrated in Africa? What could be the reason?

The volcanoes are concentrated in the eastern region of Africa. This area is near the Somali plate, which could be the reason.

5) Correlate earthquake regions, distribution of volcanoes and plate boundaries.

Most of the earthquake regions and volcanoes are located on the plate boundaries.

Q. 3 Show the epicentre, focus and the primary, secondary and surface waves of an earthquake with the help of a neat labelled diagram :

Q. 4 Gather information through internet about earthquakes which have occurred in India in the past 10 years on the basis of the following points :

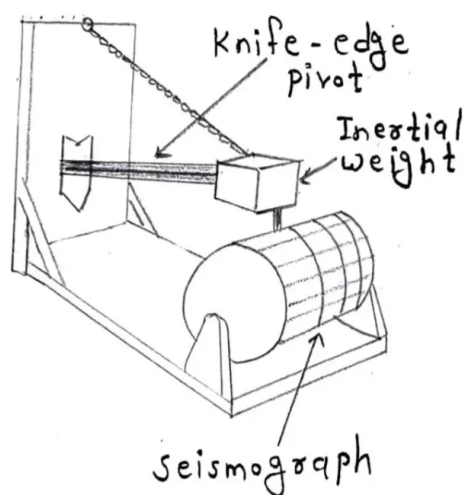

Date	Magnitude	Epicentre	Area affected	Loss/Damage
29-11-2006	4.0	Alwar	Rajasthan	Minor damage
6-11-2007	5.1	Gujarat	Gujarat	Damage to buildings
6-2-2008	4.3	West Bengal	West Bengal	Deaths
10-8-2009	7.5	Andaman Islands	Andaman	Tsunami warning
18-9-2011	6.9	Gangtok	Sikkim	Many injured
1-5-2013	5.7	Kashmir	Kashmir	Deaths

25-4-2015	7.8	Nepal	Nepal, India	Heavy destruction
12-5-2015	7.3	Nepal Border	Nepal, India	Many deaths
4-1-2016	6.7	India-Myanmar	India, Myanmar	Deaths & injuries
3-1-2017	5.7	India-Bangladesh	India, Bangladesh	Minor damage

Conclusion:

Earthquakes are one of the most dangerous disasters. The Nepal-India border region has frequently experienced such events.

Q. 5 Give it a try. (Textbook page 16)

A seismograph is a device that is sensitive to vibrations. It works on the principle of a pendulum. A heavy inert mass with resistance to movement is suspended from a frame by a spring, which allows movement and records vibrations.
