

Chapter 4: Exogenetic Processes Part II

Note: Refer to textbook diagrams/maps where necessary.

Q. 1 Identify and name the landforms in the following diagrams :

(A)

V-shaped valley

(B)

Gorge / Canyon

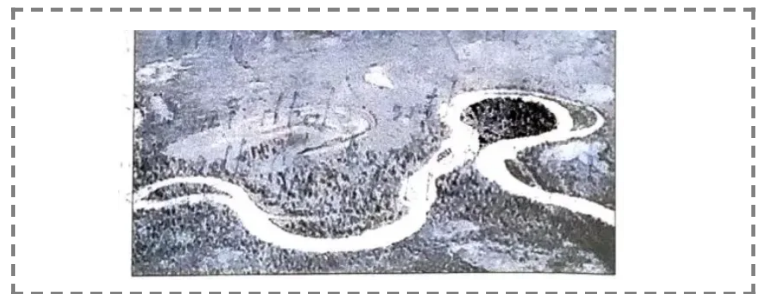

(C)

Delta

Q. 2 Give it a try (Textbook page 31)

Erosional work of river

Erosional work of river

Q. 3 Give it a try (Textbook page 32)

Erosional work of glacier

Depositional work of glacier

Q. 4 Give it a try (Textbook page 34)

Erosional work of wind

Erosional work of wind

Q. 5 Give it a try (Textbook page 36)

Erosional work of sea waves

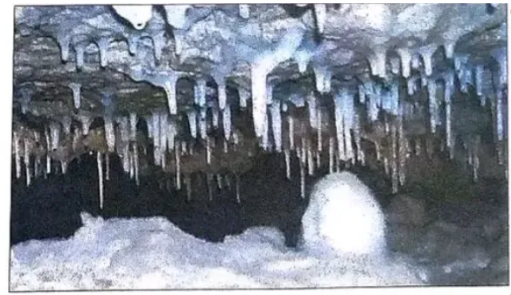

Depositional work of sea waves

Q. 6 Give it a try (Textbook page 38)

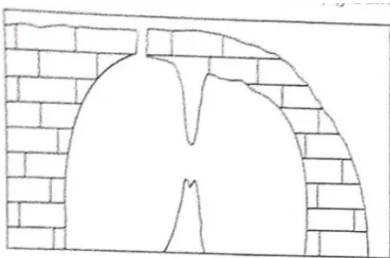

Erosional work of groundwater

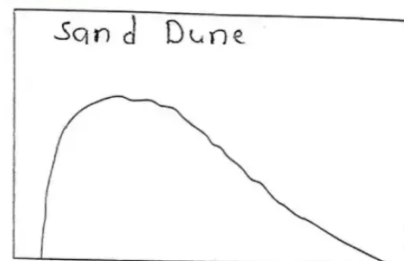

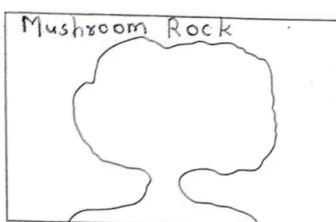

Depositional work of groundwater

Q. 7 Identify the landforms formed by groundwater in the given diagram :

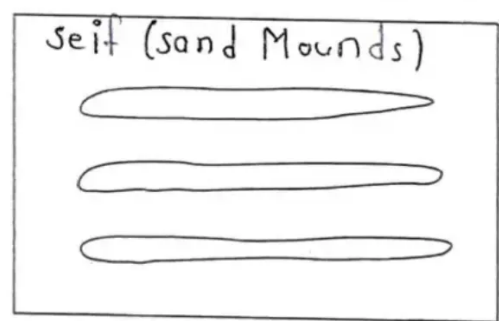

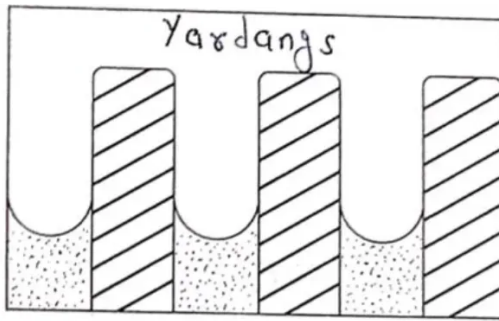

Stalactite and stalagmite cave

Q. 8 Write the names of the landforms with which the diagrams given below are associated :

Mushroom rock

Sand dune

Yardangs

Seif (sand mounds)

Q. 9 Identify the landforms made by waves and write their names :

Q. 10 Observe the picture and identify the landforms formed by different agents of erosion :

[Composite Landscape Image]

- (i) Work of sea waves: Sea cliffs, caves, sea arch
- (ii) Work of wind: Mushroom rocks, ventifacts
- (iii) Work of glaciers: Roche moutonnee, cirque, U-shaped valley, horn
