

Chapter 5 : Natural Vegetation and Wildlife

Q.1. Complete the following table.

Answer:

Physiographic Divisions	Annual Average Temperature (°C)	Annual Average Rainfall (mm)	Natural Vegetation	Wildlife
Guyana Highlands	21°C	1600 mm	Tropical Forests	Various types of apes
Amazon Basin	28°C	2000 mm	Equatorial Forests	Reptiles, arboreal and aquatic animals
Paraná Basin	21°C	1500 mm	Deciduous Forests	Grassland animals
Brazil Highlands	23°C	600 mm	Temperate Forests	Reptiles and grassland animals
Coastal Plains	27°C	1200 mm	Hot Deciduous Forests	Aquatic animals

Q.2. Make friends with maps! (Textbook page 33)

Study the following map and answer the following questions in words/sentences:

(1) Which forests are found in western coastal regions?

Answer:

Evergreen forests are found in the western coastal regions of India.

(2) On which coast do you mainly find the coastal vegetation?

Answer:

Coastal vegetation is mainly found along the eastern coast of India.

(3) Which type of forests occupy maximum area in India? Why?

Answer:

Deciduous forests occupy the maximum area in India because a large part of the country receives moderate rainfall (about 1000–2000 mm), which is suitable for the growth of deciduous forests.

(4) Where do you find thorny and shrub vegetation? Why?

Answer:

Thorny and shrub vegetation is found in Rajasthan and the rain-shadow regions of the Peninsular Plateau because these areas receive less than 500 mm of annual rainfall and have a dry climate.

Q.3. Make friends with maps! (Textbook page 34)

Name the species like Condor, Anaconda, Golden Lion Tamarin, Macaw, etc. on the following map and answer the following questions in words/sentences:

(1) In which regions are these animals found?

Answer:

Condors are found in the northern part of Brazil. Anacondas are found in the Pantanal region. Golden Lion Tamarins are found in the northern region of Brazil. Macaws are found in the eastern region of Brazil.

(2) Why are their habitats found in these forests?

Answer:

These animals are found in these forests because the climate, vegetation and availability of food are suitable for them. Dense evergreen forests support Condors and Golden Lion Tamarins, swampy lands provide a suitable habitat for Anacondas, and tropical forests support Macaws.

(3) Classify the forest regions with reference to their extent.

Answer:

Evergreen forests are found in the Guyana Highlands and the Amazon Basin. Swampy lands are found in the Pantanal region. Thorny shrubs are found in the Drought Quadrilateral of north-eastern Brazil. Hot deciduous forests and tropical grasslands (Savanna) occupy a large part of central Brazil, while temperate grasslands are found in the Pampas region.

Q.4. Try this. (Textbook page 35)

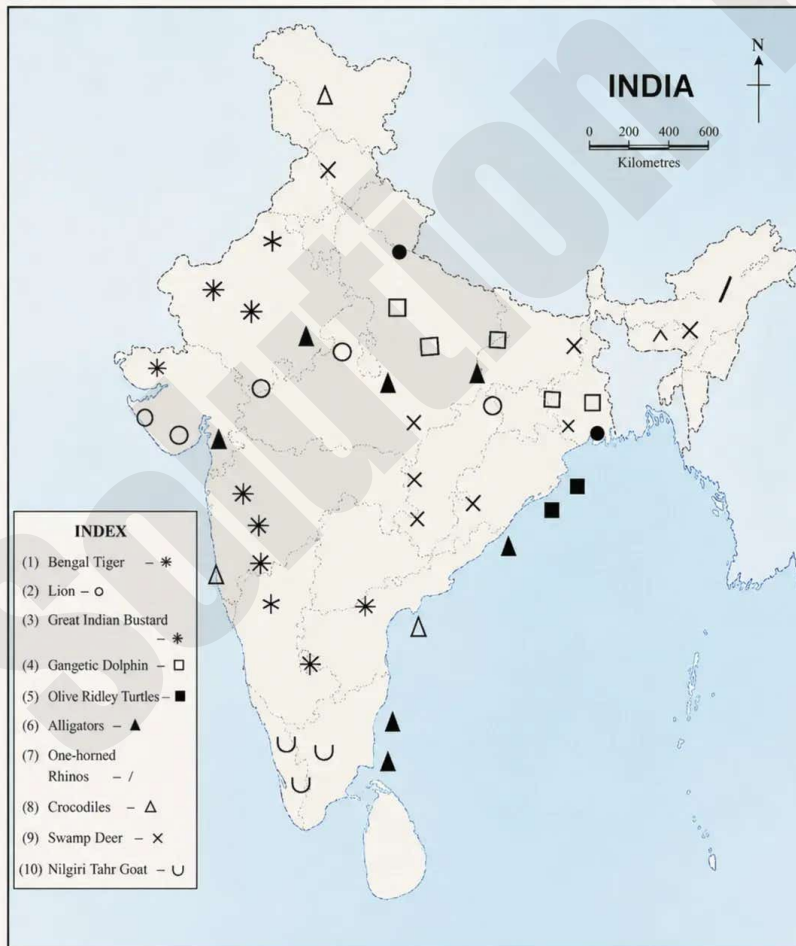

(A) Mark the following animals on a given outline map of India with the help of given signs and symbols according to their habitats.

(B) Show the habitats of tigers in India with their names.

Answer:

Map

Ans.

(C) Answer the following questions in words/sentences:

(1) Correlate geographical conditions and the flora and fauna in India.

Answer:

In India, geographical conditions vary from region to region, resulting in different types of flora and fauna. The Himalayan region has cold climate and supports limited vegetation and animals. Mangrove forests are found in the hot and humid coastal regions like the Sundarbans. The Thar Desert has thorny vegetation and animals like camels due to low rainfall. Thus, the geographical conditions determine the distribution of flora and fauna in India.

(2) Do you know some other animals too?

Answer:

Camels, Leopard, Fox, Cheetah, Jackal, Deer and Elephant.

(3) Why is the tigers' habitat found in specific regions in India?

Answer:

Tigers are found in specific regions because these areas provide dense forests, sufficient water and abundant prey. Tiger reserves such as Tadoba, Melghat, Pench, Sundarbans, Jim Corbett and Ranthambore offer suitable geographical conditions and protection, making them ideal habitats for tigers.

Q.5. Mark the following on the given outline map. Give Index.

(1) Golden Lion-Tamarin (March '19)

(2) Anaconda

(3) Condor

(4) Pink Dolphins

(5) Region where Anacondas are found in Brazil (July '19)

(6) Pampas Grasslands (July '19)

Answer:

Map
